## Activity + Fragment Running

onPause

onPause

onStop

onStop

onDestroyView

onDestroy

onDetach

onDestroy

# Fragment Lifecycle and Activity Lifecycle

---

# Summary

## **onAttach**

- The fragment has been attached to the Activity
- Provides the reference to the context of Activity

## **onCreate**

- Initialise essential components

## **onCreateView**

- Fragment draws its User Interface
- Return
  - View: Fragments layout root View
  - Null: If Fragment has no UI

# Summary

## **onActivityCreated**

- Called when Activity has been created
- And Fragment's view hierarchy instantiated

## **onStart**

- Fragment gets visible

## **onResume**

- Fragment is in Running state

# Summary

## onPause

- Indication of User leaving the Fragment
- Fragment is still visible
- Save the state of Fragment

## onStop

- Fragment is not visible
- Either host Activity has been stopped or the fragment has been removed and added to back stack

# Summary

## **onDestroyView**

- Opposite to onCreateView
- The View hierarchy of the fragment is removed

## **onDestroy**

- Final cleanup of Fragments state

## **onDetach**

- Fragment has been disassociated from its hosting Activity
