Sending Data to an Activity from Fragment

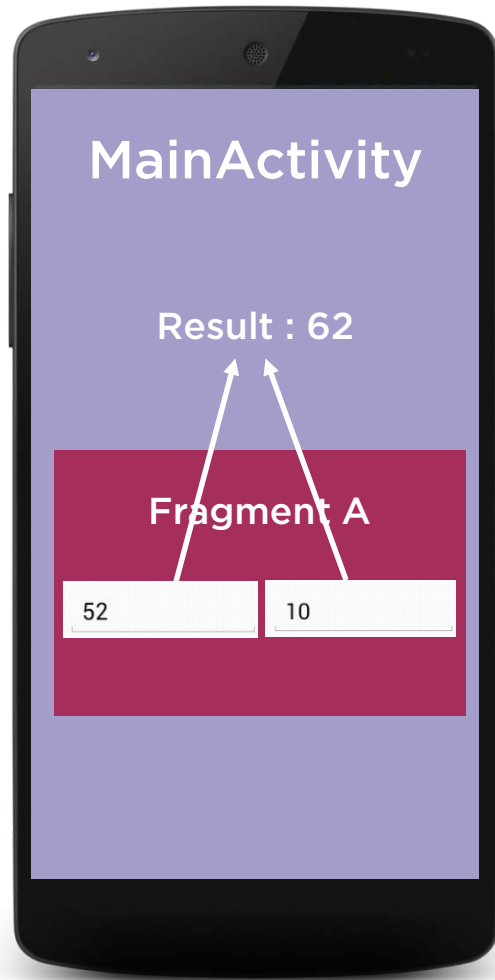

Activity to a Fragment

Communication

Fragment to an Activity

Sending Data to an Activity from Fragment

Take Input in Fragment

- First Number
- Second Number

Pass Data From Fragment to Activity

Inside Activity Perform Operation

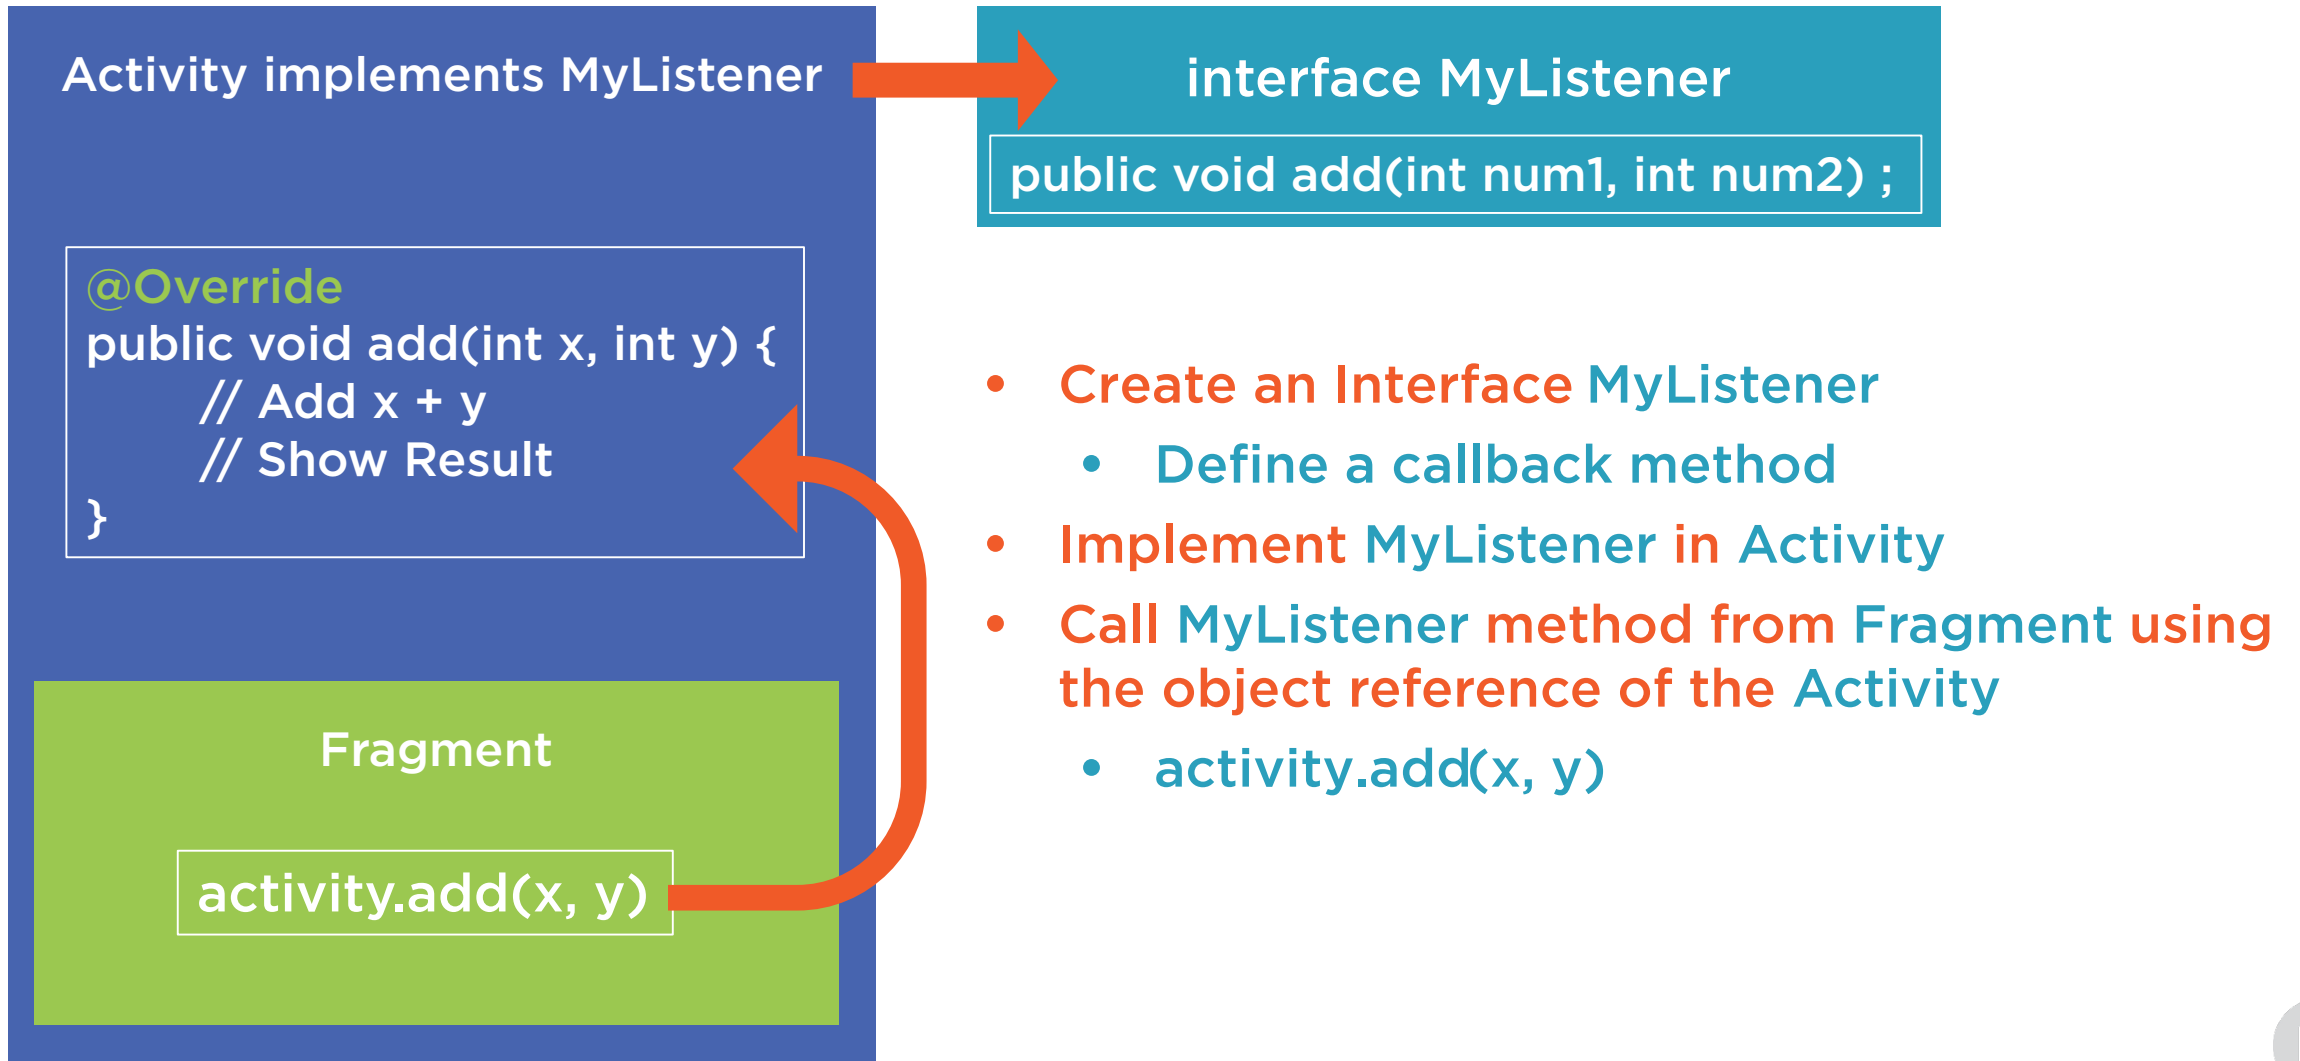

- Add Two Numbers (First Num + Second Num)
- Display the Result

Initial Project Setup

Sending Data to an Activity from Fragment

Communication from Fragment to an Activity

```
MainActivity extends Activity implements MyListener {  
  
    @Override  
    public void add(int num1, int num2) {  
        int result = num1 + num2;  
        txvResult.setText("Result : " + result);  
    }  
}
```

```
interface MyListener {  
    public void add(int num1, int num2);  
}
```

```
class FragmentA extends Fragment {  
  
    private void sendData() {  
        MyListener listener = (MyListener) getActivity();  
        listener.add( 23, 17 );  
    }  
}
```
